Cut Once logo guide

One board, one saw cut, and the cut is the numeral 1.

Cut Once

Versions

Cut Once

Horizontal. The default, wherever there is width.

Cut Once

Stacked. Square spaces, signs.

Symbol. When the name is already nearby.

Tile. App icon, favicon, avatar.

Clear space

Keep X clear on every side. X is the gap between the symbol and the word, about a quarter of the symbol's width. It scales with the logo.

Minimum size

Version	Screen	Print
Horizontal	`120 px wide`	`30 mm wide`
Stacked	`96 px wide`	`25 mm wide`
Symbol, tile	`24 px`	`6 mm`
Small-cut tile	`16 to 23 px`	`never`

Shown at minimum size when printed at 100%. Below 24 px only the small-cut tile holds: its kerf sits on whole pixels.

Colour

	Name	HEX	RGB	CMYK (proof first)
	Ballpoint blue	`#2340C8`	`35 64 200`	`82 68 0 22`
	Highlighter yellow	`#FFE14D`	`255 225 77`	`0 12 70 0`
	Ink, for the word	`#141A2B`	`20 26 43`	`53 40 0 83`
	Night	`#0C1226`	`12 18 38`	`68 53 0 85`

CMYK is straight arithmetic from RGB, not a colour-managed conversion. No Pantone is matched yet: for the blue start from Pantone 2728 C, which is slightly greener, and pick the yellow from a physical guide.

Type

Atkinson Hyperlegible Next: ExtraBold for the wordmark and headings, Regular for text. `Atkinson Hyperlegible Mono` for numbers and measurements. Both are the app's own fonts, under the SIL Open Font License.

Approved backgrounds

Colour on white `8.0:1`

Colour on paper `7.4:1`

Two-colour on night `14:1`

Two-colour on blue `6.1:1`

Black on yellow `16:1`

White on any dark colour

Ratios are the weakest logo colour against that background. On photos, use the tile. Yellow stays on blue or night; it never touches white or paper. Files: `-color` for light backgrounds, `-on-dark` for night and blue, `-black` and `-white` for one ink.

Please don't

Yellow on white `1.3:1`

Blue on night `2.3:1`

Mirror: the 1 reads backward

Close or narrow the kerf

Swap the two pieces

Add outlines or effects

Also: don't stretch or rotate, don't resize the parts of a lockup, and don't retype the word. Use the outlined files.
